

PRESS RELEASE

FOR IMMEDIATE RELEASE

Charting Singapore's urban transformation into a liveable and sustainable city, and the Centre for Liveable Cities' commitment to tackling urban challenges

In celebration of CLC's 10th anniversary, the think-tank is launching a collection of 10 publications, including a commemorative Book of Lectures.

Singapore, 8 July 2018 – The Centre for Liveable Cities (CLC), which celebrates 10 years this year, will be releasing a collection of 10 publications between 8-11 July at the World Cities Summit in Singapore (details in Appendix). CLC is a knowledge centre set up *to distil, create and share knowledge on liveable and sustainable cities*. The publications chart Singapore's experiences and insights into the challenges, innovative solutions and collaborations across key urban topics such as technology, community bonding, food security, sustainable land use and resilience.

Three highlighted publications include:

“Making Cities Liveable: Insights from 10 Years of Lectures at the Centre for Liveable Cities”

CLC's commemorative 10th Anniversary Book features CLC Lectures delivered by leading international and Singaporean figures who have devoted their lives and work to making cities and urban societies better places to live in. These include Chief Executive of Hong Kong Ms Carrie Lam, former Prime Minister of the Netherlands Mr Jan Peter Balkenende, primatologist and anthropologist Ms Jane Goodall, former Chief Urban Designer of New York City Mr Alexandros Washburn, and former master planner of Singapore Dr Liu Thai Ker. Since the Centre's founding in 2008, more than 100 lectures have been delivered at the ongoing CLC Lecture Series. These lectures offer rich insights on how to make cities liveable, a topic of growing importance as an increasingly number of people worldwide migrate to cities in search of a better life. This book will be officially launched on Sunday 8 July at the World Cities Summit Mayors Forum.

“A Resilient Singapore”

Pioneered by Rockefeller Foundation, “A Resilient Singapore” is a joint publication between CLC and 100 Resilient Cities (100RC) which captures Singapore's resilience story – an urban transformation into a highly liveable, sustainable yet high-density city state, and its continued pursuit to maintaining a competitive economy while ensuring a high quality of life for its residents. The publication delves into Singapore's ongoing and upcoming efforts to address resilience challenges such as climate change and changing demographics. Through a series of case studies, the publication demonstrates that resilience is as much about the engaging and involving communities as it is about building robust infrastructure.

“Smart Cities in Southeast Asia” report

Produced by McKinsey Global Institute in collaboration with CLC, this report offers an overview to help cities understand the promise and limitations of the new technologies at their disposal, and to help private-sector companies and citizens themselves anticipate the coming wave of change. The drive to make cities smarter is not just about what governments can do, but also creating environments where different players can bring innovation to bear on the public. The report will share insights into pathways and strategies that ASEAN cities can adopt for becoming “smarter” while balancing their own context, challenges and priorities.

Mr Khoo Teng Chye, Executive Director, Centre for Liveable Cities, said, “Encapsulated in the 10 publications are experiences and insights from Singapore’s leading thinkers, urban planners and international experts on what truly makes liveable cities. CLC is honoured to share them on our 10th anniversary during the World Cities Summit. Singapore’s achievements in urban governance and planning over the past five decades have inspired government leaders, urbanists and communities around the world. In the process of gathering knowledge to help make cities more liveable and sustainable, CLC has also broadened our global partnerships, built networks to facilitate the study of urban issues and shared insights internationally.”

“As the Centre marks its first decade, we will keep building our research, knowledge-sharing platforms, advisory projects and capability development programmes, and seek new perspectives and insight at the World Cities Summit 2018,” Mr Khoo added.

About Centre for Liveable Cities

Set up in 2008 by the Ministry of National Development and the Ministry of the Environment and Water Resources, the Centre for Liveable Cities (CLC)'s mission is to *distil, create and share knowledge on liveable and sustainable cities*. CLC's work spans four main areas – Research, Capability Development, Knowledge Platforms, and Advisory. Through these activities, CLC hopes to provide urban leaders and practitioners with the knowledge and support needed to make our cities better. For more information, visit <https://www.clc.gov.sg/>.
